Rather than providing 'out of the box' hosting solutions, **adapt's** approach begins with a full and complete understanding of your business requirements, expectations, aspirations and budget. Armed with this information, we're able to propose an appropriate hardware and software solution that meets your key criteria.

We serve over 55,000 sq ft of prime central London data centre space and 25,000 sq ft of high power and cooling technical real estate on the M25 periphery. We provide high quality environments built around our customers' geographic, power/cooling density and telecoms requirements, all secured within flexible contracts, fixed pricing and guaranteed service levels, throughout Europe, USA and Asia.

adapt's dedicated managed hosted server solutions are designed to provide you with a reliable, secure and high performance hardware and software solution using the internet itself. Our carrier grade data centre facilities, tier 1 internet services, in house LAN and security skills combine to give you a scalable platform for your IT and web based service delivery – allowing you to focus entirely on your business.

What's on offer?

Server hardware specification and support

Server OS software and support

Internet access solutions

Dual site, managed resilience and N+1 redundancy

Flexible contract and finance terms

Remote access

Bespoke solution design, build and support
