Energy Savings Trust

Our access network is based on the latest WiMAX technology and can deliver fully symmetrical internet access at speeds up to 10Mbps and is backed by an industry leading service level guarantee. If speed is a critical requirement for you, our network allows you to upload data at the same speed as you download – unlike traditional ADSL connections. In contrast to traditional SDSL services, our network delivers true symmetrical speeds of 2Mbps, 4Mbps, 6Mbps, 8Mbps or even to a current maximum of 10Mbps. And there's no need to wait for ages to get connected as **adapt** will connect you in less than a week for a fraction of the cost of dedicated internet access or leased lines.

One of the key benefits of our network is that being wireless it doesn't use traditional copper wire or fibre and is totally separate from traditional BT infrastructure. With **adapt** even if your telephone line or fibre connection gets cut, or the local exchange goes down, you are guaranteed continuity of service. As your indispensable partner we ensure our services are backed by quality of service guarantees that are well ahead of the game and we bring you the innovative technologies that suit you – not us.

What's on offer?

Flexible packages

2Mbps, 4Mbps, 6Mbps, 8Mbps
or 10Mbps services.

Fully symmetrical

Upload as quickly as you download.

Truly independent

We own our network end to end
and have total separation from
the BT infrastructure.

Fast installation

We can usually install our service
in less than a week.

Quality of service guaranteed

99.5% SLA.

Highly secure

To US government standard.

Unlimited usage

No data caps or data limits.

Significant cost saving against SDSL and leased lines

30% to 70%.

Added resilience

Our service can be combined with
traditional wired connections to ensure
complete resilience.
