

adapt and reduce the risk and complexity within your organisation's security systems

Information is a major asset to your business – information supports a multitude of processes, from deals to mergers, to projects, to employee details.

Any disruption in the quality, quantity, distribution or relevance of your information systems can put your business at risk from attack. The security of information systems and business-critical information must be actively managed in order to reassure your employees, stakeholders, customers and partners of data safety.

With the increase in frequency and sophistication of security and internet attacks, firewall, protection by intrusion detection/prevention systems (IDS/IPS) and virtual private networks (VPNs) is now a critical part of a security policy for all businesses, especially where there is a dependence on the internet.

adapt can minimise your exposure to common threats, identify and assess your system and application vulnerabilities, and provide management and 24/7 monitoring all at a lower cost than managing it yourself.

adapt's managed security products include both standalone firewall, VPN and IDS/IPS, as well as fully integrated appliances from leading vendors such as Cisco and Juniper. **adapt** manages every aspect of the installation, monitoring and maintaining your security – leaving you to focus on your

business's goals and objectives, with the confidence that **adapt's** security experts are proactively working on your behalf.

Flexible solutions

adapt recognises that security needs differ from one company to another and that the security requirements of a small business can be very different from a large multi-server or multi-office organisation. **adapt** thus provides a flexible approach, tailoring solutions to fit our customers' needs, whether you require security protection at your premises, within an **adapt** data centre or 'in the cloud'.

adapt's range of security devices varies from WLAN IDS/IPS through perimeter firewalls to application host-based anomaly detection.

Customised solutions

adapt's security experts will work with your organisation to provide the perfect solution and architecture for you and to define a robust security rule-base which meets the needs of the whole business. Over the years, **adapt** has acquired a wealth of experience in managing security solutions for our clients and have grown a security team that provides a world class service.

Benefits

- Choice of brand-leading vendors, including Juniper, Checkpoint and Cisco
- VPN configuration service with site-to-site deployment
- Accommodation of all scenarios, from small to large networks
- Scalable service to meet your growing business needs
- 24/7/365 SOC management and monitoring service
- Access to our team of experienced, accredited security engineers
- Economically viable 24 hour security

Features

- Incident response, action, updates and resolution in accordance with SLAs
- Installation of upgrades under software and hardware licences
- On-line reporting
- Managed change control
- Security assessment of system change requests
- Defence in depth multilayer security available
- ISO 27001:2005 certification

Scalable service

adapt provides a scalable service to meet growing and changing business needs. With **adapt** you can start with a basic firewall and add anti-spam and anti-virus protection. Then move to complete security coverage that includes threat management, distributed denial of service (DDoS) attack mitigation, and log management. Whatever your needs, **adapt** has the security services to address them.

Cost-effective solutions

Security technologies are expensive, and constantly changing. Just keeping your equipment and software up to date can take a significant share of your IT budget. Then add to this the cost of recruiting and retaining skilled personnel, and the bill mounts up. **adapt** is a perfect match for companies looking for a complete solution covering the technical sophistication they need without the costs of developing and retaining highly skilled security expertise in-house.

ISO 27001:2005 Information Security Management Systems Certification

adapt is certified to the globally recognised security accreditation ISO 27001:2005, Information Security Management System (ISMS), demonstrating **adapt**'s commitment to IT systems security and customer satisfaction.

Security partnerships

adapt partners with the leading security software vendors, including Cisco, Juniper and Checkpoint.

- Virtual Data Centre >

Partner suppliers

adapt is the independent managed services provider that is reducing cost and complexity from IT.

At **adapt** we focus on maximising the assets you already have rather than just selling you more services. What's more, being vendor-independent we don't have a stake in which technology you choose. Instead, our job is to recommend the best solution for your business, helping you design and integrate your technology for maximum efficiency. This often involves

consolidation and virtualisation of your assets, which can significantly improve your utilisation rates as well as immediately reducing your energy bills.

adapt is a client-led rather than a technology-led company, and works with its customers to develop modular propositions that support immediate business needs and can scale for future growth.

At **adapt** we believe that complexity is the enemy, and

this ethos is promoted from the initial architecture planning through to intelligent system design, performance and capacity management.

adapt provides services to over 850 customers in the areas of:

- Colocation and Hosting
- Connectivity and Internet
- Managed services
- Cloud services

Reduce cost and complexity within your IT talk to **adapt**.
